

Project Executable Files

Date	15 July 2026
Team ID	SWTID-2026-1518
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	No
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Credit_Card_Approval_Prediction/

```

|
|— dataset/
|   |— credit_card_dataset.csv
|
|— models/
|   |— trained_model.pkl
|
|— notebooks/
|   |— model_training.ipynb
|
|— src/
|   |— app.py
|   |— prediction.py
|   |— preprocessing.py
|   |— utils.py
|
|— static/
|
|— templates/
|   |— index.html
|   |— result.html
|
|— requirements.txt
|— README.md
|— .env.example
  
```

Step 3: Deployment / Access Details

Field	Details
-------	---------

Hosted / Deployed URL	Not Deployed(Local System)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local Machine
Repository Link	Private/Not Available
Demo Video Link	Available with Project Submission

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install Python 3.10 or above.
2. Open the project folder in VS Code.
3. Install dependencies using:

```
pip install -r requirement.txt
```
4. Run the application:

```
Python app.py
```
5. Open the URL displayed in the terminal (for example, <http://127.0.0.1:5000>).
6. Enter applicant details and click Predict.
7. View the credit card approval prediction result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the dataset.	Improve accuracy by training with a larger and more diverse dataset.
2	The application currently runs only on a local system.	Deploy it to a cloud platform such as Render, Azure, or AWS.
3	The model uses historical data and may not reflect future policy changes.	Periodically retrain the model with updated data.
