

Solution Requirements

Date	15 July 2026
Team ID	SWTID-2026-1518
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users authenticate securely using mobile number/email with OTP and password; admins use multi-factor authentication.	High
2	Authorization levels	Customer, Bank Officer, Admin roles with role-based access control.	High
3	External interfaces	Integrates with credit bureau APIs, Aadhaar/PAN verification, SMS/Email gateway.	High

		<i>services the system must connect to]</i>	
4	Transactions processing	Processes application submission, verification, approval, and status updates securely.	High
5	Reporting	Generate approval reports, application status dashboards, audit logs.	Medium
6	Business rules, etc.	Eligibility checks based on credit score, income, KYC and policy rules.	High
7	Compliance to laws or regulations	Comply with RBI guidelines and applicable data privacy regulations.	High
8	<i>Other</i>	Send notifications via SMS/email for each application stage.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	<i>[Describe response times, processing speed, etc.]</i>	<i>(e.g., Page loads in < 2 seconds)</i>
2	Scalability	<i>[Describe how the system handles growth in users or data]</i>	<i>(e.g., Supports up to 10,000 concurrent users)</i>
3	Security & Data Privacy	<i>[Detail data protection, encryption, and vulnerability management]</i>	<i>(e.g., End-to-end AES-256 encryption)</i>
4	Reliability & Availability	<i>[Specify uptime requirements and fault tolerance]</i>	<i>(e.g., 99.9% uptime per month)</i>
5	Usability & Accessibility	<i>[Describe user experience standards and accessibility compliance]</i>	<i>(e.g., Complies with WCAG 2.1 AA standards)</i>
6	<i>Other</i>	Send notifications via SMS/email for each application stage.	Medium
